Period f r Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claim 6 is objected to because of an informality, which can be corrected as follows: In line 2, delete the second occurrence of "setting tool." Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Burkart-Wolf et al. (EP517151). Burkart-Wolf et al. disclose, in figures ("Bild") 2 and 14, instrumentarium comprising a button (6) with a plate-shaped body; an oval, cylindrical pin (at 6.21) projecting from a planar side of the plate-shaped body, and two openings (6.8), where the plate-shaped body has two opposite edges (at top and bottom), which can be grasped and turned with, e.g., forceps; a depression in an area opposite of the cylindrical pin (at the bottom), smooth curvatures at the openings, and an annular flange (1) as a limit stop.

Note: The introductory statement of intended use ("for implanting a tendon replacement in a channel in a bone") has been carefully considered but deemed not to impose any structural limitations on the claims patentably distinguishable over the

device of Burkart-Wolf et al., which is capable of being used as claimed if one desires to do so.

Allowable Subject Matter

4. Claims 6, 7, and 11-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art of record, alone or in combination, discloses instrumentarium including, inter alia, a button having a plate-shaped body and a cylindrical pin combined with a setting tool by which a countersunk recess can be managed in bone, a knot holder, a tensiometer, or a button-turning tool.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Althens (3,135,032), Davis (4,667,675), Sun (6,006,404), Hart (5,630,824), and Rayhanabad (6,241,749) teach suture buttons.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julian W. Woo whose telephone number is (703) 308-
